Home task 3

Angular

Task 3. Unit testing

1. Take a look into spec files, generated by [Angular CLI](#).
2. Get familiar with testing documentation from angular.io <https://angular.io/guide/testing>.
3. Fix all generated specs to pass [ng test](#).
4. Cover courses listing page component.
5. Cover course item as a component with [@Input](#) and [@Output](#). Please try the following approaches:
 - a. Test as a class
 - b. Use Stand Alone testing
 - c. Test host testing
6. Cover all other components in your application.
7. Try to reach about **80%** of coverage for your components.

Evaluation criteria

- 2 Generated tests are working well and passing test.
- 3 Implemented courses listing tests.
- 4 Covered course item.
- 5 Did all above, covered other components and coverage greater than 80%.
