Angular

Task 12. Internationalization

Ngx-translate

Using ngx-translate to create a localization to another language besides English.

1. Install [ngx-translate](#).
2. Configure [ngx-translate](#).
3. Create locale file(s).
4. Localize text on all pages.
5. Create dropdown to choose language and place it in the header.
6. Compare [i18n](#) with [ngx-translate](#). What are the main differences?
